OUTPUT
• Taglish disaster tweets
• Pretrained encoder
• 13 multi-task optimizers
1. Design and Artifact Creation
Build and label the dataset
(Research Question 2)
2. Baseline Analysis
Train two single-task models
(Research Question 1)
3. Empirical Benchmarking
Train one multi-task model
per optimizer
(Research Question 3)
4. Comparative Validation
Test which optimizers differ
significantly from equal
weighting
Relate negative transfer
to training cost
(Research Question 4)
• Labeled dataset and its
inter-annotator agreement
• Baseline scores for each task
• Training time and peak
memory per optimizer
• Negative transfer per
optimizer
• Optimizers that differ
significantly from equal
weighting
• Relation between negative
transfer and training cost
